

Meet Corzap

Reliable banks offer secure, transparent and rapid services to their customers all over the world. In the next few years, the volume of financial transactions will keep rising, just like the need for strict compliancy and real time processing. The SWIFT gpi certification enables banks to track messages, settle beneficiary accounts in real-time, demonstrate fees and charges and communicate remittance data unaltered.

Corzap is an eVision solution. It is future-ready software - implemented by global banks and regional service bureaus - to enable them to achieve straight through processing of cross border SWIFT transactions.

Corzap Solutions

The Corzap SWIFT gpi suite consists of 3 complementing components that plug into a bank's core system; performing tasks that enable faster settlement of the SWIFT transaction.

Solutions

Modules

Nine modules that plug into a bank's core system; performing tasks that enable faster settlement of the SWIFT transaction.

- 
Search and Archive
 SWIFT messages are archived automatically in live mode, allowing users to search, display and export.
- 
Internal & external message notification
 SWIFT message alerts between departments in real time and automatic customer notification.
- 
Regulatory reports
 Report on the full history of any SWIFT transaction, enabling the generation of sound statistical analytics.
- 
Automatic message matching
 Matching capability of SWIFT messages to facilitate and control movement of funds.
- 
Correspondent bank fee calculation
 Automatically calculate bank charges and fees of different stakeholders in the transaction process.
- 
Claims Management
 Generate revenue through charges and fees on non-compliant messages.
- 
GPI message monitor
 Real time connect with SWIFTgpi via API; generate status messages and become a communication hub for a bank's back office (GCCT/GCOV/GSRP status ready).
- 
Message mapping & Routing
 Map the journey of a SWIFT message, regardless of the syntax version update.
- 
Transaction Posting
 Communicate and post transactions fees directly into banks core system.

Key Features

SWIFT gpi suite

The Corzap SWIFT gpi suite is designed to address back office operational needs, message monitoring and gpi compliance requirements for SWIFT. It will ultimately enable your customers to settle transactions in real time, more transparently and within a digitally transformed banking environment. The Corzap SWIFT gpi suites requires no alterations on the legacy backend systems. It is a plug and play solution.

Customers Segments

■ SME banks ■ International banks ■ Government banks
